

GRIDALIGN

Coordination Opportunity Report

Georgia Power

Plant Vogtle Units 1 & 2 Extended Power Uprates

Distance between closest known points: 32.82 km

Dominion Energy South Carolina

Urquhart - Aiken PSA 46 kV: Rebuild

PROJECTS

- Project A: Plant Vogtle Units 1 & 2 Extended Power Uprates, located in Burke County, Georgia.
- Project B: Urquhart - Aiken PSA 46 kV: Rebuild, located in Aiken County, South Carolina.

WHY GRIDALIGN FLAGGED THIS PAIR

These projects were flagged because their closest known points are 32.82 km apart, placing them within GridAlign's under 40 km geographic screening threshold.

GEOGRAPHIC ANALYSIS

At a separation of 32.82 km across the Georgia-South Carolina state line, the projects are too far apart to share access roads, right-of-way, or physical laydown yards. However, this distance falls within the range where utilities could potentially coordinate regional contractor mobilization, regional equipment sourcing, or broad area grid operations.

TIMELINE ANALYSIS

Timeline compatibility cannot be fully confirmed from the provided data. Project B has a scheduled completion date of December 31, 2027, but its start date is missing. Project A has an approved status, but its start and completion dates are entirely unspecified. It is therefore uncertain whether construction activities will overlap.

COORDINATION OPPORTUNITIES

If the construction timelines coincide, the utilities could potentially explore:

- Shared regional contractors, if specialized high-voltage electrical or substation contractors are working on both the 46 kV line and the plant electrical balance-of-plant modifications.
- Coordinated mobilization of specialized heavy-transport or testing equipment that may be operating in the broader Augusta-Aiken regional market.
- Regional outage and transmission sequencing, if modifications and testing at Plant Vogtle require regional grid configurations that could interact with local sub-transmission line outages.

POTENTIAL BENEFITS

Practical benefits could include:

- Reduced duplicate mobilization fees if specialized contractors or testing vendors can be scheduled consecutively between Burke County and Aiken County.
- Enhanced grid reliability and reduced conflict risk through shared visibility into outage scheduling across neighboring utility systems.

RISKS AND LIMITATIONS

- Distinct work scopes: Project A involves nuclear power plant uprates inside a secure facility, whereas Project B is an outdoor 4.5-mile 46 kV transmission rebuild. These different scopes require largely incompatible specialized skill sets.
- Jurisdictional separation: The projects operate across state lines (Georgia and South Carolina) under different regulatory frameworks and utility organizations.
- Incomplete schedule data: Without start dates for either project or end dates for Project A, timeline alignment remains speculative.

FINAL ASSESSMENT

LOW

While the projects fall within the 40 km regional radius, the stark divergence between a nuclear generation uprate and a 46 kV sub-transmission rebuild, combined with complete schedule uncertainty, restricts coordination to limited, indirect regional planning.

RECOMMENDED NEXT STEP

Utility planners should conduct an informal scheduling check once Project A establishes target outage dates to ensure sub-transmission work on the Aiken 46 kV line does not conflict with regional grid requirements.
