Coordination Opportunity Report

Georgia Power

Plant Vogtle Units 3 & 4

Distance between closest known points: 20.83 km

Dominion Energy South Carolina

Jackson 115kV: Construct 115 - 12kV Distribution Substation

PROJECTS

- Plant Vogtle Units 3 & 4: A nuclear power plant project developed by Georgia Power in Burke County, Georgia.
- Jackson 115kV: Construct 115 - 12kV Distribution Substation: A planned distribution substation construction project in Aiken County, South Carolina, with an unspecified utility operator.

WHY GRIDALIGN FLAGGED THIS PAIR

The projects were flagged due to geographic proximity. The closest known points are 20.83 km apart, placing them in the under 40 km category.

GEOGRAPHIC ANALYSIS

At a separation of 20.83 km across state lines, the sites are too far apart to share access roads, laydown yards, or rights-of-way. However, being within the 40 km threshold, the projects are close enough that utilities could potentially coordinate regional construction planning, share regional contractors, or coordinate mobilization for specialized equipment.

TIMELINE ANALYSIS

Project B has a planned completion date of 12/31/2028, with no start date specified. Project A has no start date or completion date provided in the records. Because schedule information for Project A is entirely missing and Project B lacks a start date, timeline compatibility cannot be confirmed.

COORDINATION OPPORTUNITIES

- Shared mobilization of specialized heavy equipment, if this equipment is required by both sites during overlapping phases.
- Shared contractors or specialized trade crews, if both entities operate within the same timeframe and can leverage common regional labor pools.
- Regional construction planning and scheduling to avoid competing for area suppliers or freight resources.

POTENTIAL BENEFITS

- Potential reduction in freight and transport costs through coordinated equipment mobilization.
- Improved resource availability if regional contractor schedules can be sequenced efficiently.
- Reduced duplicate logistics overhead for heavy transport in the regional corridor.

RISKS AND LIMITATIONS

- Completely missing schedule data for Project A prevents confirmation of any active work overlap.
- Disparate project types: a massive nuclear power plant versus a \$3,003,760 distribution substation replacement. Nuclear work has rigorous regulatory, security, and quality standards that may limit resource sharing.
- Cross-border jurisdiction between Georgia and South Carolina, potentially involving different operating utilities and regulatory bodies.

FINAL ASSESSMENT

LOW

Although the distance is 20.83 km, coordination value is limited by the lack of schedule verification, the vast difference in project scope and nuclear regulatory constraints, and cross-state administrative boundaries.

RECOMMENDED NEXT STEP

Project managers should contact each other to exchange verified project schedules and determine if any construction activity will occur concurrently before 2029.
