

GRIDALIGN

Coordination Opportunity Report

Georgia Power

Plant McIntosh Upgrades

Distance between closest known points: 12.58 km

Dominion Energy South Carolina

Jasper - Okatie 230 kV #2: Construct

PROJECTS

- Project A: Plant McIntosh Upgrades, associated with Georgia Power and the Georgia Public Service Commission, located in Rincon, Effingham County, Georgia.
- Project B: Jasper - Okatie 230 kV #2: Construct, located between Jasper and Okatie in Jasper County, South Carolina; utility company not specified in the supplied data.

WHY GRIDALIGN FLAGGED THIS PAIR

GridAlign flagged this pair because their closest known points are 12.58 km apart, placing them in the under 40 km category.

GEOGRAPHIC ANALYSIS

At a distance of 12.58 km, the projects are not adjacent but are located within the same regional territory along the Georgia-South Carolina border. Under GridAlign criteria for projects under 40 km, this proximity may allow the utilities to share specialized contractors, coordinate mobilization, or engage in joint regional construction planning.

TIMELINE ANALYSIS

Project B is currently in progress with an estimated completion date of December 1, 2026, although its start date is not provided. Project A is approved, but its start date and completion date are not specified. Because schedule information for Project A is incomplete, timeline compatibility cannot be fully confirmed.

COORDINATION OPPORTUNITIES

If the construction schedules overlap, potential coordination could include:

- Sharing specialized high-voltage electrical or substation contractors.
- Coordinating mobilization of heavy equipment, such as heavy-lift cranes or transport vehicles, if such equipment is required across both sites.
- Sequencing regional labor requirements to reduce local contractor competition.

- Aligning heavy equipment delivery logistics along regional transport corridors.

POTENTIAL BENEFITS

Coordinating between these projects could potentially:

- Lower mobilization and demobilization expenses by sharing contractor travel and equipment staging.
- Improve regional availability of specialized electrical trades by coordinating workforce demand.
- Reduce regional transportation conflicts by staggering major equipment deliveries.

RISKS AND LIMITATIONS

- Project A lacks start and completion dates, preventing verification of simultaneous work.
- The project scopes differ, with Project A focusing on natural gas plant upgrades and Project B focusing on transmission line and CIP hut construction.
- The projects are situated in different states (Georgia and South Carolina) and likely involve distinct utility operators, which could create jurisdictional and administrative barriers.

FINAL ASSESSMENT

MEDIUM

Meaningful coordination appears plausible through shared regional contractor mobilization and specialized high-voltage resources, but important uncertainty remains regarding Project A's timeline, missing project details, and cross-border utility alignment.

RECOMMENDED NEXT STEP

Utility planners should initiate an informal coordination call to review Plant McIntosh's expected construction timeline and identify overlapping windows for shared contractor mobilization.
